List of Figures	vi
List of Tables	vii
Foreword	ix
Preface	xi
1 Becoming Familiar with FreeBSD	1
1.1 Building an X Server and a Window Manager	1
1.2 Customizing Your Desktop Environment	2
1.3 Using PC-BSD	6
1.4 Using DesktopBSD	12
1.5 Fun with X.org	18
1.6 Configuring Java and Flash	25
1.7 Configuring Sound Applications	27
1.8 DVD Playback on FreeBSD	30
1.9 Playing Audio and Video Files with FreeBSD	34
1.10 Tips and Tricks	36
1.11 Odds and Ends	41
1.12 FreeBSD for Linux Users	46
1.13 FreeBSD for Linux Admins	52
2 Useful Unix Tricks	59
2.1 Useful Commands	59
2.2 Finding Things in Unix	64
2.3 Read The Friendly Manpage! – A Tutorial	73
2.4 Working with Text	85
2.5 Using the vi Editor	91
2.6 Customizing the Login Shell	97
2.7 Understanding Shell Prompts	103
2.8 Monitoring Unix Logins	108
2.9 Discovering System Processes	114
2.10 The System Startup Daemon: init	124
2.11 Where the Log Files Live	128
2.12 Getting Cron to Do Our Bidding	134
2.13 Understanding the Automatons	141
2.14 Adding Users to FreeBSD	154
3 Ports, Packages, and PBIs	163

3.1	Ports Tricks	163
3.2	portupgrade	170
3.3	Cleaning and Customizing Your Ports	176
3.4	make for Nonprogrammers	181
3.5	Building Binary PC-BSD Packages	187
3.6	Interesting Ports	194
3.7	Browsing through the Ports Collection	203
4	Bag of Tricks	209
4.1	SETI@home	209
4.2	Running Windows Applications on FreeBSD	211
4.3	Multi-Platform Remote Control	217
4.4	An Introduction to Webmin	220
4.5	Webmail with Usermin	228
5	Filesystems	233
5.1	An Introduction to Unix Permissions	233
5.2	Dividing Your Data	244
5.3	Understanding Filesystem Inodes	252
5.4	Mounting Other Filesystems	256
5.5	Accessing MS-DOS Filesystems	260
5.6	Using FreeBSD's ACLs	265
6	Backups and RAID	279
6.1	Using Software RAID-1 with FreeBSD	279
6.2	Understanding Archivers	284
6.3	Backing up Files with Tar	288
6.4	Understanding CPIO	294
6.5	Archiving with Pax	299
7	Networking	305
7.1	Connecting to the Internet Using PPP or a DSL Modem	305
7.2	Networking with TCP/IP	309
7.3	FreeBSD Networking Basics	315
7.4	Using Wireshark	321
7.5	Accessing a Cisco Router	326
8	Configuring Services	331
8.1	Building a Unix Server	331
8.2	Unix Printing Basics	336
8.3	Setting up a Secure Subversion Server	341
8.4	Accessing Secure Subversion Servers	346
8.5	Understanding Email	353
8.6	Procmail Basics	358
8.7	Filtering Spam with Procmail	362
8.8	Proxy Terminology 101	366
8.9	HTTP Proxies	370
8.10	SMTP Proxies	376
8.11	Configuring a TFTP Server	384
8.12	Introducing DHCP	391

8.13	Configuring a DHCP Server	396
8.14	DHCP on a Multi-Segment Network	403
8.15	Configuring and Using NFS	409
9	Security	413
9.1	Securing FreeBSD	413
9.2	Avoiding Trojans and Rootkits	422
9.3	Checking System Integrity with tripwire	425
9.4	File Integrity and Anti-DDoS Utilities	432
9.5	One-Time Passwords	439
9.6	PAM	443
9.7	Establishing Good Password Policies	448
9.8	Improving User Passwords with appg	455
9.9	Cracking Passwords to Enhance Security	461
9.10	Hiding Secrets with Steganography	464
10	Firewalls and VPNs	471
10.1	TCP Protocol Layers Explained	471
10.2	Capturing TCP Packets	476
10.3	IP Packets Revealed	484
10.4	Examining ICMP Packets	492
10.5	Scanning Your Network	498
10.6	IPFW Firewall	501
10.7	IPFW: Fine-Tuning Rulesets	507
10.8	IPFW Logging	511
10.9	Monitoring IPFW Logs	516
10.10	Building a Desktop Firewall	519
10.11	Sharing Internet Connections	528
10.12	Cryptographic Terminology 101	535
10.13	The SSH Cryptosystem	540
10.14	Configuring SSH	546
10.15	VPNs and IPsec Demystified	551
10.16	Configuring IPsec	555
10.17	Debugging IPsec	562
	Index	567

List of Figures

1.1	The Tasks menu	9
1.2	Online Update	10
1.3	Update Now!	11
1.4	Choosing an update server	14
1.5	Upgrading packages	15
1.6	Four window managers running simultaneously through Xnest	22
1.7	Watching a remote window	24
4.1	BOINC Manager	210
4.2	Webmin Main Menu	225
5.1	Viewing file properties in Nautilus	267
5.2	Editing ACLs in eiciel	269
5.3	Adding to a user's ACL	271
5.4	ACL properties for the new directory	273
5.5	Adding default ACL properties	275
5.6	Effective ACLs	276
5.7	Files and the default directory ACL	277
8.1	Checking out with rapidsvn	352
10.1	Your new firewall	521
10.2	Inserting a rule	524
10.3	Firewall rules that allow ssh	527
10.4	My complete rulebase	531
10.5	My NAT rule	532
10.6	An HTML firewall log report	535
10.7	VPN gateway to a network	551
10.8	A secure network over an insecure network	552
10.9	A logical VPN diagram	558

List of Tables

1.1	Kernel Modules for Video	19
1.2	DVD Region Codes	31
1.3	Video Player Capabilities	36
1.4	Video MIME Types	37
2.1	Common find Primaries	65
2.2	vi cut-and-paste	95
2.3	Default Shell Prompts	103
2.4	Shell Configuration Files	104
2.5	Signals	119
2.6	/etc/ttys Configuration	125
2.7	Syslog Facilities	131
2.8	Syslog Levels	132
2.9	Syslog Actions	133
2.10	cron Time Fields	135
2.11	cron String Values	136
2.12	Daily Periodic Scripts	143
2.13	Security Scripts	150
2.14	Weekly Scripts	152
2.15	Monthly Scripts	153
5.1	DOS fdisk Slices	246
5.2	Common Device Names	256
5.3	Common Filesystem Types	258
7.1	IPv4 Classes	312
7.2	Reserved Private IP Range	313
7.3	Default Subnet Masks	313
8.1	NetBIOS Node Types	405
9.1	File Integrity Utilities	433
9.2	Common Unix DDoS Agents	436
9.3	Four PAM facilities divided into six primitives	444
9.4	PAM's Control Flags	444
9.5	User Class Capabilities	450
10.1	IP Header	472
10.2	TCP Header	474
10.3	UDP Header	475
10.4	ARP Header	492
